

EiWiki:Administrators

Administrator rights are granted by the community to users requesting them. The process involves considerable discussion and examination of their activities as an validator, technical editor and content administrator.

Users who are members of the 'administrator' user group have access to a number of tools to allow them to carry out certain functions on the FORwiki. The tools cover processes such as page deletion, page protection, blocking and unblocking, access to modify fully protected pages and the FORwiki interface, and the ability to grant and remove account creator, rollback, ipblock-exempt rights, confirmed user, autoreviewer, and edit filter manager rights to other users. Administrators are otherwise no different from any other editor.

See <Special:Listusers/sysop> for a list of users in this group.
